## List of Contents

### NUMBER 1

- |  |   |
|--|---|
| <b>Bert De Reyck<br/>and Willy Herroelen</b>   | <b>1</b> An optimal procedure for the resource-constrained project scheduling problem with discounted cash flows and generalized precedence relations |
| <b>James R. Soltys<br/>and James P. Ignizio</b>  | <b>19</b> Boundary search procedure for the design and training of an ontogenic neural network classifier   |
| <b>A. Tuzikov, M. Makhaniok<br/>and R. Männer</b>                                      | <b>31</b> Bicriterion scheduling of identical processing time jobs by uniform processors  |
| <b>Víctor Parada,<br/>Mauricio Sepúlveda,<br/>Mauricio Solar<br/>and Arlindo Gomes</b> | <b>37</b> Solution for the constrained guillotine cutting problem by simulated annealing  |
| <b>Kun-Jen Chung</b>   | <b>49</b> A theorem on the determination of economic order quantity under conditions of permissible delay in payments                                 |
| <b>Konstantin Kogan<br/>and Eugene Levner</b>  | <b>53</b> A polynomial algorithm for scheduling small-scale manufacturing cells served by multiple robots   |
| <b>Lakdere Benkherouf</b>  | <b>63</b> Note on a deterministic lot-size inventory model for deteriorating items with shortages and a declining market                              |
| <b>F. R. B. Cruz,<br/>J. MacGregor Smith<br/>and G. R. Mateus</b>                      | <b>67</b> Solving to optimality the uncapacitated fixed-charge network flow problem   |

### NUMBER 2

- |   |  |
|---|--|
| <b>Christos Koulamas</b>                              | <b>83</b> A guaranteed accuracy shifting bottleneck algorithm for the two-machine flowshop total tardiness problem |
| <b>Shigeru Tsubakitani<br/>and James R. Evans</b>     | <b>91</b> Optimizing tabu list size for the traveling salesman problem   |
| <b>Yong Ju Kim, Yeo Keun Kim<br/>and Yongkyun Cho</b> | <b>99</b> A heuristic-based genetic algorithm for workload smoothing in assembly lines                             |
| <b>Ho Woo Lee<br/>and Boo Yong Ahn</b>                | <b>113</b> A queueing model for optimal control of partial buffer sharing in ATM                                   |
| <b>David Wright</b>                                   | <b>127</b> Analysis of the market for access to broadband telecommunications in the year 2000                      |
| <b>Adli Mustafa and Mark Goh</b>                      | <b>139</b> Finding integer efficient solutions for bicriteria and tricriteria network flow problems using DINAS    |

**Qidong Cao  
and Mark A. McKnew**

- 159 Partial termination rule of Lagrangian relaxation for manufacturing cell formation problems

#### NUMBER 3

**James A. Chisman**

- 169 Using discrete simulation modeling to study large-scale system reliability/availability

**Hoon-Shik Woo  
and Dong-Soon Yim**

- 175 A heuristic algorithm for mean flowtime objective in flowshop scheduling

**Tayfur Altioek, C. Vu Duy  
and Melike Baykal-Gursoy**

- 183 Two load sharing processors with failures

**H. W. Lee, J. G. Park,  
B. K. Kim, S. H. Yoon,  
B. Y. Ahn and N. I. Park**

- 191 Queue length and waiting time analysis of a batch arrival queue with bilevel control

**Moon-Won Park  
and Yeong-Dae Kim**

- 207 A systematic procedure for setting parameters in simulated annealing algorithms

**Sehun Kim and Jaehyun Yeo**

- 219 Optimal scheduling in CDMA packet radio networks

**Gengui Zhou and Mitsuo Gen**

- 229 An effective genetic algorithm approach to the quadratic minimum spanning tree problem

**A. J. Orman, A. K. Shahani  
and A. R. Moore**

- 239 Modelling for the control of a complex radar system

#### NUMBER 4

**Ina S. Markham  
and Terry R. Rakes**

- 251 The effect of sample size and variability of data on the comparative performance of artificial neural networks and regression

**M. Selim Akturk  
and M. Bayram Yildirim**

- 265 A new lower bounding scheme for the total weighted tardiness problem

**Willy Herroelen,  
Bert De Reyck  
and Erik Demeulemeester**

- 279 Resource-constrained project scheduling: a survey of recent developments

**Masood A. Badri,  
Donald L. Davis,

I

1. The first part of the paper is devoted to a general discussion of the problem of the existence of a solution of the system of equations (1) for a given set of initial conditions. It is shown that the system of equations (1) has a unique solution for a given set of initial conditions if the functions  $f_i(x, y, z, t)$  are continuous and satisfy the Lipschitz condition with respect to the variables  $x, y, z$ .
